New User Success Guide, FAQs, and Training Checklist

When you are ready to start using DonorView, whether that is before or after your data has been converted, we suggest the following steps to set yourself up for success. These 12 steps can be performed out of order and concurrently if desired.

☐ **Step 1 – Watch the Welcome Video**

It may have been a few weeks since you watched the welcome video, but it is a great introduction to all the modules and features of the software and it's less than 15 minutes long.

☐ **Step 2 – Identify a Database Manager**

Within your organization there should be one person identified as the Database Manager. This person will have administrative access to the database and be your main point person to make decisions on the processes, workflows, and picklists management within the software.

☐ **Step 3 - Review the Module Guides**

The module guides provide information about the main functions performed in each of the modules, as well as the sub-pages in each module. Read the guides here.

☐ **Step 4 - Review the Glossary of Terms & Field Names**

The DonorView software uses some unique terminology. It is important to understand their respective meanings as they relate to the software. Read the Glossary of Terms, the Constituent Grid Data Fields and Gifts Grid Data Fields.

☐ **Step 5 – Create a Training Plan**

Learning any new software takes time and practice. The best way to tackle this is to prioritize what you need to do in the software first, such as learning how to enter donations. Use the checklist attached to make your plan and check out this article for new users. If you have purchased initial training or specialized training, the training team will reach out to schedule your sessions.

☐ **Step 6 – Get Familiar with the Functionality**

The data in the software platform is shown in grids and most grids have similar functionality. Reports are built from the grids by creating views using queries, filters, and sorts. The training videos demonstrate the functionality, and you can learn more details in these articles.

☐ **Step 7 – Convert Your Current Workflows to DonorView**

It is helpful to map out your current workflow, then apply that process to DonorView. A workflow is the steps you take to accomplish a task. For example, if you write down all the steps you currently take to enter a donation, you can compare the steps for entering a donation in DonorView and apply them to your organization's specific criteria. This helps to cement your understanding of how the software works.

☐ **Step 8 – Practice!**

Practicing is the best way to learn. You can enter test constituents, create views, create test pages, and even send test emails. Remember that transactions and constituents can be easily deleted using the trash can icon. You can also practice entering names and internal transactions while your data is being converted, the implementation team can also delete any sample data you enter. Entering yourself and a personal email address is a great place to start. Some basic functions you should practice include:

- Entering a new individual constituent and a new company constituent
- Creating a view on a grid
- Sending a direct email
- Entering a new donation
- Creating a new donation page
- Editing an email template
- Creating a mail merge template for donation acknowledgements

☐ **Step 9 – Determine Categories and Lists**

The software offers many ways to segment data using picklists. Picklists allow you to sort data for reports and identify constituents for email lists and mailings. Some of the fields may have already been named in your data conversion, such as identifying your constituent categories. The database manager should maintain these lists, and all users should consistently apply them to ensure reliable reporting. Some important picklists you will want to customize include:

- Constituent categories
- Revenue categories including the transaction For, Fund, Event, and Appeal lists*
- Interaction types and categories and Follow Up types
- Relationship categories
- Time tracking service categories

To learn more about managing your picklists read this article.

*Please note that if QuickBooks integration is set up on your account then one or more of the For, Fund, Event and Appeal fields will be set up to correlate to your QuickBooks account and should not be changed. It will be important to select the correct For, Fund, Event and/or Appeal that correlates to your QuickBooks mapping. If that is not done, then transactions will not be able to be exported. See this article for more details Transactions are not Showing on the QB Export Grid

☐ **Step 10 – Add Your New Pages to Your Website**

Creating your new pages and adding those donation, event, and membership pages to your website will get you fully integrated with the software. You can also embed email subscription links, surveys, applications, and even goal progress widgets to inspire your website visitors. You can learn more about adding your pages to your website here. Check out the videos below about creating your new pages:

- Internal Vs. External Page Views
- Donation Pages
- Event Pages
- Auction Pages
- Membership Pages

☐ Step 11 – Reach Out for Help

Many answers to your questions can be found in our support articles library or video library. The DonorView support team is also here to help, and you can send an email to support@donorview.com to ask any questions or report any issues you may have. The team will respond with links to articles, videos, or screenshots and step by step instructions to get you moving forward again. If you have Essential or Essential Plus support, you have access to live, weekly webinars, and telephone phone support. Learn more about the features of your support plan here.

☐ Step 12 – Time to Grow and Implement New Processes

After you get your basic workflows in DonorView, it is time to start implementing some of the advanced features, like Sponsorships and Automated Actions, to take your fundraising to the next level. DonorView is set up to manage all fundraising activities, to allow you to streamline your efforts and take advantage of the efficiencies a single platform can offer. Here are links to some recent webinars for fundraising:

- Donor Engagement Webinar
- Giving Tuesday Webinar
- Maximizing Event Revenue Webinar

Frequently Asked Questions

Briefly, how does DonorView work?

DonorView is a cloud-based Constituent Relationship Management (CRM) software, also known as a database platform. You must use an internet browser, like Google Chrome, to access the software. It is used to maintain a database of all your constituents in one place, whether they are donors, volunteers, event attendees, granting agencies, email newsletter subscribers, or other contacts. The platform is organized into modules, and each module lets you perform specific tasks, like building donation pages or registering guests for an event. Everything that you send from the database and any transactions that come into the database, like donations, are saved in each constituent's record. This allows you to see a complete history of their giving, attendance, volunteer time, survey responses, communications, memberships, and even things like whether they opened an email or not. You can see the details for one constituent or see grids to view all responses and transactions for donations, events, surveys, memberships, or other data.

Where do I start?

Start by identifying your daily, weekly, monthly, quarterly, and annual activities. The things you need to do daily are those you should prioritize learning first. So, if you enter donations each day, you will review the videos or attend the webinars to learn more about that process in DonorView. Once you are up to speed on your daily activities, then you can look at your weekly tasks. If you need to send a report to your board each week, you'll review the Fundraising Reports article and watch the video about the Fundraising Gifts grid. If you have any questions about your next steps or where to find the information for performing specific activities, reach out to support@donorview.com for more guidance.

What is the difference between a constituent and a donor or a member?

A constituent is any entity that you want to communicate with or record transactions for. A constituent can be a person, a family, or an organization. Members are constituents that have purchased or been gifted a membership transaction. Donors are individuals or organizations that have made a contribution to your organization. All members and donors are constituents, but not all constituents are members or donors.

What is the difference between a dashboard and a grid?

DonorView uses the term "grid" to describe the way the data is displayed – it looks similar to a spreadsheet. A Dashboard is a built-in graphical display for each module that shows charts depicting things like the number of transactions added this week, month, and year, or percentage of emails marked as "unsubscribe." Click the links to learn more about grids and dashboards.

Who can see the data in my database?

You will establish who is a DonorView user and what user rights they have. User rights allow you to restrict which modules they can view and have editing capabilities. The software allows you to create unlimited users. Click the links to learn more about managing users and user rights.

How can I communicate with my constituents using DonorView?

DonorView allows you to send direct emails, email marketing newsletters, text messages, and letters from the software using the Actions menu from most grids. You can learn more about all the features of the Actions menu here.

Why do I need to verify my domain name with DonorView?

Your organization should have a website domain name and have email addresses that utilize that domain name, like donations@helpingthekidsnow.org. The verification process will give DonorView permission to send emails through our servers using your domain name. This will help with deliverability of your emails and reduce the chances it will go into a spam or junk mail folder. It is not possible to verify a personal email address like those from Gmail, Yahoo, Outlook, or Hotmail. Sending emails in the software using a non-verified domain name will increase the likelihood of it being identified as spam.

Why do I need to have an email address with my organization's domain name?

Generic emails like those from gmail.com, @yahoo.com, or @outlook.com cannot be verified. Only email addresses, like "yourname@yournonprofit.org" can be verified and identified as a legitimate sender, not a bot or spammer. This will improve the deliverability of your emails and reduce the chances the emails you send from the platform end up in their spam or junk folder.

Why do you use the word "pages" for forms created with DonorView?

Each donation form, membership sign-up form, auction bid site, or event registration page has a unique URL generated by the software that is a stand-alone webpage, or "page." If you want someone to be able to buy tickets to your event, it is necessary to have an online form that identifies the time, location, ticket levels, etc. as well as collect information about the person or organization that is making the purchase. That transaction is processed by DonorView and the information about the purchaser and all their guests is automatically added to the database. You can then use that information to communicate with your attendees, check them in for the event, and track their participation.

How do I start collecting donations with DonorView?

First, you will set up a sub-merchant account to be able to accept credit cards on your pages. Once you have set this up, you or your implementation manager can create a Donation Page to share on your website or via social media. A Donation Page is built using a step-by-step wizard in the Fundraising module. You can create unlimited pages, and each page has a unique URL, QR code, and html code that can be embedded into your existing website. You can learn more about creating donation pages in this video.

Can I customize the way my pages look?

There are some options to change the fonts and color theme on Event, Membership, Auction and Survey Pages. However, at this time, the layout of these pages is built-in and cannot be changed. The Donation Pages do offer a simple page builder where the software builds the page for you, but you also have an option for an advanced page designer which allows you to organize the page any way you desire.

How will I know if someone makes a donation on one of my Donation Pages?

You can set up notifications to alert you when a donation is made, and you can see every transaction that has been recorded in the Fundraising Gifts grid.

How will I be able to produce financial reports?

You will be able to create a variety of "views" on the Fundraising Gifts grid to show specific types of transactions, date ranges, and apply other filters as desired. You can learn more about fundraising reports in this article.

How can I see what credit card deposits went into my bank account?

If you have the appropriate user rights, you can see a weekly statement for all deposits in the Billing area. Most credit card deposits are made within 24 to 48 hours of the transaction, but for holidays adjacent to weekends, it could take longer due to banking schedules. Deposits will be posted from "Connected View," which is DonorView's parent company.

How will I know if a credit card charge failed?

Anyone who is listed as a notification recipient for a page will receive a notice of a failed credit card transaction. You can also see the information in the Pending status on the transaction record.

Can I enter donations of checks, cash, and in-kind items?

Absolutely. There are a number of options for manually entering donations, pledges, pledge payments, and in-kind contributions. The contribution can be entered from the constituent's record, or you can enter multiple donations from the Gifts grid.

Can people make a donation as a tribute or in honor of someone?

Yes, you can include these fields as well as other optional information to collect on your donation pages and the information can be manually recorded as well.

How does DonorView manage events?

Like Donation Pages, an event begins by creating an Event Page. The Event Page allows you to establish the types of ticket levels that are available, the prices, and lets you collect information about the purchaser and their guests. There are many types of events that can be created with the software, and each event has its own unique URL, QR code, and embed code to allow you to share your event registration page on your website, via social media, and in links in emails. Everyone who purchases tickets for your event is tracked in the Events grid. You can also see details about the event attendees on the Event Attendance grid. DonorView even lets you create table seating maps, has an event calendar, and can send auto-reminders to your guests. This guide helps you manage an event in the software.

Can I update event guest information after they register?

You can update guest information anytime using the Event Attendance grid. If you have the Advanced Donor Portal, guests can also update their own guest information.

Can I sell sponsorships for events?

Yes, sponsorships can include multiple attendees, like a table of 8 for a gala or a foursome for a golf tournament. You can also track the deliverable for sponsorships via the Fundraising module in the Sponsorships grid.

How can I sell things like t-shirts, programs ads, or raffle tickets?

You can either include these as add-ons to your ticket sales event, or you can create separate event pages to sell items.

Can I manage an auction using the software?

The software has an auctions module to allow you to host silent, live, and online auctions. If this is an in-person auction event, you can also record paddle raise (fund-a-need, call-to-heart) donations and sell add-on items like raffle, game, and pull tickets. The text marketing feature must be activated to use the online auction feature. We have an entire FAQ document and guidelines for hosting auction events.

How are memberships different than donations?

A membership is a specific kind of transaction and usually involves some kind of benefits associated with the purchase. For example, a museum may offer free admission, discounts in the gift shop, a digital magazine, and early notification of events to members. Donations are typically contributed without receiving anything in return for the gift.

How do I start collecting membership dues?

If your organization has a membership program, building a membership program all starts with the Membership Page. The step-by-step wizard will allow you to establish your membership types, levels, expiration date, and pricing.

Can I sell family or group memberships?

Yes, the software allows you to set up a variety of types of memberships, including setting up family memberships and a la carte options to pay for additional family members.

How do I send membership renewals with DonorView?

DonorView allows you to send auto-renewal reminders to your members. You can also create renewal letters using the Mail Merge GM Templates feature and send them using the Actions menu on the Memberships grid. The software also has an option to offer your members the opportunity to sign up for auto-renewals on the membership page.

What if someone wants to pay for their membership with cash or a check?

You can record payments internally for memberships that are made with a payment method other than credit card. You can also offer your members an option to select "Pay Later" on the Membership Page, so that they can mail you a check for their payment. From the member's profile, you can record the payment when it is received.

What is the Constituent Portal used for?

The Constituent Portal has two options, a Basic option and an Advanced option. The Basic option allows you to host Peer-to-Peer Campaigns and Auctions using the portal and allows your constituents to

create an account and update their personal information. With the Advanced option, you can allow your constituents to see their donation history, update their pledges, add volunteer time, renew their memberships, and update their guest information for events. There is an additional subscription fee for the Advanced option, and it is based on the number of constituent portal accounts.

How do DonorView, the Portal, and my website work together?

- DonorView, also known as a CRM database platform, is where all you constituent data records are stored. This is also where you create the pages and widgets to add to your website.
- You can add links, embed your pages, and insert widgets that you created in the platform on your website. This is manually done by whomever manages the design of your website.
- The Constituent Portal is a website for your constituents to access their own personal information. You can add the link to register or login to the Portal to your website if desired. The constituents who create a Portal account can view and update their own personal information but cannot see anyone else's data.
- The graphic below outlines some more of the interfaces.

DonorView Database Platform-Website-Portal Interfaces

DonorView Database Platform

Who can access the platform? Only DonorView (DV) Users.

Who can make changes to the data? Only those authorized DV Users.

What Can a DV User do?
- Enter/View/Edit Constituents
- Create donation, survey, membership, event, and auction pages
- Send emails, letters, and texts to constituents
- Record donations, pledges, event registrations, and memberships
- View transaction histories for constituents
- Manage records
- Create reports
- Manage grants, sponsorships, directories, event calendars, and other widgets
- Track interactions, volunteer time, email engagement, survey responses, event attendance

What information from the DV platform can be seen on my organization's website? You will need to manually add the links, HTML codes, or widgets to your website wherever you would like the information to display. You can share:
- Links to donation, membership, event, auction, and survey pages.
- Membership Directories
- Event Calendars
- Email Subscription Boxes
- Goal Progress Thermometers

Do updates that constituents with a Portal account makes to their person information update the DV platform database? Yes, if a constituent updates their contact information or other information in their Portal account, it is automatically reflected in your database.

Your Organization's Website

Who can view your website? Anyone with your website address.

Who can make changes to your website? Only those with access to your website editor.

What can be shared from the DV Platform on our website?
- Any donation, membership, event, survey, auction, or form created in DV has a URL link or an HTML embed code to add the form to your website.
- There are also widgets and links for things like calendars, email subscriptions, goal progress thermometers, and membership directories that can be added to your website.
- You can also add a link to create a Portal account or sign in to the Portal.

Do changes I make in the DV platform automatically update the pages and forms on my website? Yes, any changes to your pages, widgets, forms, directories, etc. will automatically be reflected on your website.

Do donations and registrations automatically update the DV database platform? Yes, any transactions registered through the pages you share on your website will automatically update the database as well.

The Constituent Portal

What does the Portal do? Allows your constituents to update their personal information, view some of their personal data, and participate in online auctions or peer-to-peer campaigns. An Advanced Portal subscription allows you to activate additional features like membership renewals, volunteer time tracking, and updating event guest information.

Do I have to use the Portal? No, the portal is optional and can be disabled for your account.

Can constituents with a Portal account see other people's data or my whole database? No, they can only view their own data, and if you authorize it, a membership directory.

Do donors, members, or other constituents need a Portal account to make donations, sign up for an event, or get a membership? No, a Portal account is not required by default, however you can activate the requirement if desired.

Who can create a portal account? Anyone who has a link to the portal registration webpage.

Who can make changes to the Portal? Only Admin level DV users can make changes to the information shared with constituents on the portal. Only an Admin can turn on/off the Advanced Portal or disable Portal access altogether for their account.

Do my constituents automatically get a Portal account? No, each constituent must create their own account using the exact same First Name, Last Name, and Email that you have in the DV database platform. This will link to their existing record. If the user does not have an email address or they use a different name or email, a new constituent record will be created.

Are portal accounts automatically created?

No, a constituent must create a portal account by signing up. They must use the exact same First Name, Last Name, and Email address to link to their existing record in the database. See this article for information about inviting your constituents to create a portal account.

Why are duplicate records created when someone signs up for an event or creates a portal account?

The software looks for existing matches by email address as well as the exact same name. This means the constituent must use the same primary email address you have on file for them, and they must spell their first and last name the exact same way. For donation, membership and event pages, you can turn off the matches for first and last name, but the software will always use email address as the primary match. You can learn more about managing duplicates in this article.

Can I use DonorView on my phone?

Because of the grid details and complexity of the views, the DonorView database platform is best viewed on a larger screen like a laptop or a desktop monitor. You will not be able to effectively manage the database from a phone. However, the pages you create, like your membership, event or donation pages, are all mobile optimized to look great on any mobile device. So, you can share your page links and QR Codes on your website, social media, or email, and they are accessible on any device with internet access.

Is there a mobile app for DonorView?

Yes, however it is a simpler version of DonorView that links back to the cloud-based version. The mobile app, DV Connect, is only available from iTunes for Apple devices and is not compatible with Android. It allows you to do things like sell events tickets at the door, check in guests for events, look up constituent records, allow volunteers to check in using Kiosk mode, and swipe credit cards using special swipers only available from DonorView. You can learn more about the mobile app's features and the swipers in their respective videos.

Training Checklist

Use this checklist to keep track of your training progress. Prioritize the subjects in the Priority column and record the date you have completed the training task. Some items have been pre-identified with a Priority "1" to indicate some of the basic information every user should review.

Priority	Date Complete	Workspace > Module	Sub Page, Grid, or Activity	Video/Article Links
